

BASIC WHMCS REGISTRAR MODULE INSTALLATION

Extract the full folder “internetbs” and its content under:

/YourLocalPath/whmcs/modules/registrar

Remember to replace “/YourLocalPath” with the actual location where you installed WHMCS.

Double check your previous operation; “internetbs” should appear under the following path:

/YourLocalPath/whmcs/modules/registrar/

2) From WHMCS administration page enable our module:

"Setup->Domain Registrars" and from the dropdown list select "Internetbs"

For production/live enter your API key and password as provided by us.

For testing just check "TestMode" and enter the following credentials:

API key: testapi

Password: testpass.

Now click the button named “Save Changes”.

Registrar Settings Other Settings

You can configure the settings required to connect to your domain registrar below. Begin by choosing the registrar from the dropdown menu and then you will see the configuration options for that registrar.

Choose Registrar Module: **Internetbs** Go

Username	testapi	Enter your Internet.bs ApiKey here
Password	••••••••	Enter your Internet.bs password here
TestMode	<input checked="" type="checkbox"/>	Check this checkbox if you want to connect to the test server
SyncNextDueDate	<input type="checkbox"/>	Tick this box if you want the expiry date sync script to update both expiry and next due dates (cron must be configured). If left unchecked it will only update the domain expiration date.

Save Changes

Domain Synchronisation Cron

This registrar module has a sync script which can be run periodically to ensure expiry dates, next due dates and domain statuses are always up to date inside your WHMCS system. To utilise this feature, you need to setup a cron with the command below to run every few days.

```
php -q /home/www.dev/html/whmcs/modules/registrar/internetbs/internetbssync.php
```

NOTE: If you plan on configuring the cron job to synchronize expiration dates of your domains (useful when you have pending transfers or have autorenewal enabled for your domains in your account on our system) when the “SyncNextDueDate” checkbox is not checked the script will only update the status and the expiration date. If you check the “SyncNextDueDate” it will also update the Next Due Date which determines the time when WHMCS will issue a new invoice for the domain.

After clicking “Save Changes” go to “Setup->Domain Pricing” and from the drop down list select “Internetbs” for each TLDs (domain extension) you want to manage using our module. For more details please refer to the picture below:

Domains/TLDS

This is where you configure the TLDs that you want to allow clients to register or transfer to you. Aswell as pricing, you can set which addons are offered with ea EPP code is required for transfers, and whether registration should be automated and if so, with which registrar.

TLD	Pricing	DNS Management	Email Forwarding	ID Protection	EPP Code	Auto Registration
<input type="text" value=".com"/>	Open Pricing	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs
<input type="text" value=".fr"/>	Open Pricing	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs
<input type="text" value=".asia"/>	Open Pricing	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs
<input type="text" value=".co.uk"/>	Open Pricing	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Internetbs
<input type="text" value=".eu"/>	Open Pricing	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Internetbs
<input type="text"/>		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	None

ADVANCED WHMCS REGISTRAR MODULE INSTALLATION

***supporting .eu, .be, .it, .fr, .re, .asia, .us and .uk ***

In order for WHMCS to support .eu, .be, .it, .fr, .re, .asia, .us and .uk domains, you have to perform the following additional steps:

- 0) Complete the BASIC MODULE INSTALLATION first.
- 1) Copy the file *itterms.html* to the root of your WHMCS instalation
- 2) Open the local file */YourLocalPath/whmcs/includes/additionaldomainfields.php* and append the following line at the very end of the file:

```
include(ROOTDIR."/modules/registrars/internetbs/internetbs_additionaldomainfields.php");
```

For .it you also need to copy the file *itterms.html* from the archive into the root folder of your whmcs installation. (*/YourLocalPath/whmcs/*).

You can now configure your price list and enjoy our module!
